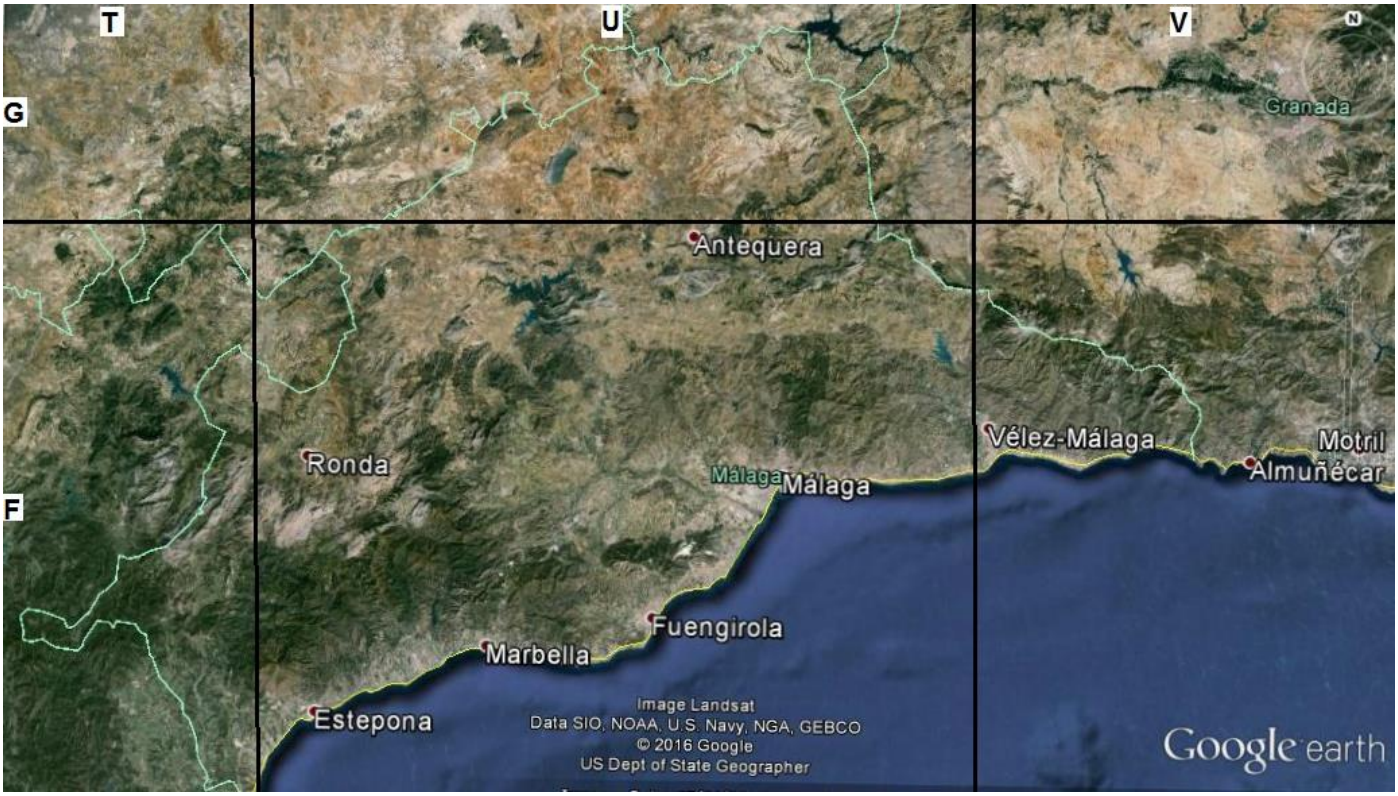
10km Square Distribution of Orthoptera: Ensifera in and around Málaga

Since 2010 I have been noting the 10km UTM squares in which I have found different species of Orthoptera. These for the Ensifera [crickets & bushcrickets] are set out below. The first map shows all the squares in which I have recorded at least one Orthoptera species. This reflects coverage as much as rarity of species.



Squares with Orthoptera Records
